Abstract (en)
[origin: WO2009112191A1] The invention relates to a fuel distributor assembly, having a distributor tube (10) and at least one connecting nipple (12) welded to the distributor tube for connecting a branch line to a cross-bore (16) leading through the wall of the distributor tube (10), wherein an outside of the connecting nipple transitions into the outside of the distributor tube via an annular groove (26), which at least partially surrounds the outside of the connecting nipple and is integrally molded into the outside of the distributor tube (10).
