Abstract (en)

[origin: WO2009112128A1] A heat exchanger plate (3a) for a plate-type heat exchanger having throughflow openings (4-7), which are arranged adjacent to one another in the plane of the plate, for fluid media, which heat exchanger plate (3a) is formed from a first material, in particular steel or high-grade steel, is characterized in that those surfaces (18a, 19a, 20a) of the heat exchanger plate (3a) which come into contact with one of the fluid media are formed from, or lined, with another material which is in particular more corrosion resistant than the first material.
