Abstract (en)

[origin: WO2009112007A1] The arrangement (1) comprises distributor pipes (6) that are supported by horizontal bars (3) and have downwardly directed spray nozzles (16) and mist collectors (8). The bars (3) are provided with bearing points (5) that are open toward the top and extend across the entire lengths thereof for the integration of the distributor pipes (6). Two consecutive bearing points (5) each in the longitudinal direction of the bars (3) are separated from each other by means of a support (7) for the mist collectors (8). Beneath the bars (3), multi-layer dripping installations (13) are provided, against which cooling air blows.
