Abstract (en)  
[origin: WO2009097042A1] The Customized Electronic Services Delivery System provides customized electronic services to passengers who are located onboard an aircraft by storing data indicative of a plurality of electronic services that are available to passengers who are located onboard an aircraft, as well as data indicative of preferences of passengers for the plurality of electronic services. Once a correspondence is made between the electronic services and an identified passenger, the Customized Electronic Services Delivery System advises the passenger of the availability of the customized services and establishes wireless communications between the passenger's electronic device and the selected electronic service. The electronic services include in-flight entertainment services as well as destination-based services which link the passenger's existing travel plans with offers for additional services that are available to the passenger at their nominal destination and their planned travel schedule.
