Abstract (en)

[origin: EP2251151A1] The tool (1) has a housing (5) with a motor housing (2) and a grip part (4) connected with each other. Damping elements (10, 11) and spring elements are cooperated with the motor housing and the grip part. The grip part partially encompasses an outer side of the motor housing. Recesses (6, 7) extending in a radial direction are attached to the motor housing. A fastening dome (8), a fastening bolt (9) and a bar are radially projected into the recesses. The damping and spring elements are arranged between a lateral surface of the dome, bolt and the bar and a wall surface defining the recesses.
