Abstract (en)
[origin: EP2251210A1] A device (1) for squeezing a paint tool comprises a mesh (2) against which a paint tool can be pressed to remove excess paint. The mesh (2) has a concave shape and defines side walls, from which supports (5) extend, suitable for constraining the device (1) to the lips of a container (7) containing the paint to be applied. The device (1) also has a continuous surface (9) that extends from an edge (10) inserted between the side walls.
