Abstract (en)

[origin: EP2251292A1] The paraffin coating device (5) has a housing, a drive shaft rotatably supported in the housing and a spring element for axial impingement of the paraffin body. The drive shaft is formed in a telescopic manner and has a shaft piece with an end-sided coupling device and another shaft piece with an end-sided coupling element. The coupling device and the coupling element are designed such that the drive shafts adjoining paraffin coating devices are joined together to a continuous and easily separable drive train (53). The drive shaft is made of plastic.
