Abstract (en)
Washing machine comprising: - a washing tub containing a rotary drum; - a draining sump fluidly communicating to the internal of the tub and fluidly connected to a draining circuit; - a housing, provided in the draining sump, for a filter adapted to impede the passage of bodies of fixed dimensions from the tub to the draining circuit; - an opening, obtained in a lateral surface of the drum, adapted, when facing the housing, to allow the access to the filter; - a closing device adapted for selectively closing the opening; the washing machine comprising locking means adapted to selectively lock the rotation of the drum with respect to the tub when the opening faces the housing (11), and/or locking means adapted to impede the opening of the closing device when the opening doesn't face the housing and to allow the opening of the closing device when the opening faces the housing.
