Abstract (en)

[origin: EP2251491A1] The device (10) has a support- and guide frame (20) at which milling units (30, 40) with milling wheels (31, 41) are arranged in parallel for producing milling cutouts. The milling units are movably supported parallel to each other. Rotation axis of the milling wheel runs transverse to a longitudinal axis of the frame. One of the milling units is movably guided along a drilling direction at the frame independently of another milling unit. A hydraulic lifting device (50) is arranged for moving the milling units, and connected with the support- and guide frame and the milling units. An independent claim is also included for a method for removing soil material.
