Abstract (en)

[origin: EP2251554A1] The device (D) has a stud (5) integrated to a handle rod (1) and a member (3) rotatably connected to a shutter casing output (S) or to a handle (2). A stopping element (11) between the rod and the stud has a plastic clip (12) installed on the stud for engaging at inside of a hollow outer element (6) in a free space between the stud and an inner wall of the hollow element. The clip has an end part (13) shifted transversely for engaging in a hole (14) of the hollow element to establish retractable translation connection between the stud and the hollow element at the end of assembling process.
