Abstract (en)

[origin: EP2251607A2] The method involves implementing a preparing process over a duration specified in a preparing program. An average heating power is adjusted in an energy saving mode of the preparing program for a preset reduced duration. The average heating power is reduced in comparison to average heating power of a heating device in a normal mode of the preparing program. The preset reduced-duration is begun before reaching an end timepoint of the program duration. The heating device is deactivated during entire reducer-duration.
