Abstract (en)

[origin: EP2251885A1] The switch-disconnector has a fixed contact (1) connected to an electric conductor. A mobile contact (2) linearly translated for assuring passage and cutting of electric current by a current passage position in which the mobile contact is contacted with the fixed contact and a current cutting position in which the mobile contact is spaced from the fixed contact. An electrical resistor (3) has a contact linearly extending in a linear displacement direction of the mobile contact along a path of the mobile contact.
