Abstract (en)
[origin: WO2009097139A2] An extendable drip tray is provided to increase when needed the drip catchment area of the dish rack, to beyond the footprint or general perimeter of the dish rack. The extendable drip tray may be slidably supported by rails below the main body of the dish rack, to cover an area beyond the side of the dish rack body, thereby increasing the drip catchment area. Pivoted cup holders are provided along the outside walls of the main body of the dish rack, which can be pivoted when needed to extend an area beyond the perimeter of the body to provide supports for holding kitchen articles such as cups and glasses for drying. A wire rack is provided with pivoted support prongs for configuring the wire rack.
