Abstract (en)  
[origin: WO2009115210A1] The invention relates to roller grinding mills comprising a grinding plate (1), grinding rollers (M), and at least two drives (A) acting upon the grinding plate (1), and to a method for operating such a roller grinding mill. At least one grinding roller and simultaneously at least one matching drive (A) can be disengaged during operation. Thus only small radial forces are created that effect the radial bearing of the grinding plate (1).
