Abstract (en)

[origin: WO2009113115A1] The web material comprises an edge area with preferably linear protuberances (PA, PC), disposed so as to mutually intersect and be joined tip-to-tip. In the central. area, inside a frame or parallel longitudinal edges embossed tip-to-tip, the material presents a decorated embossed area (PD). In the central area and in the edge area glues with different chromatic characteristics are used to mutually join the plies obtaining a chromatic decorative effect.
