Abstract (en)

[origin: US2010319558A1] The invention describes a chamber doctor blade (1) for a rotary press to be applied to an ink transfer roller (2) of a rotary press. This chamber doctor blade (1) comprises a doctor blade base (3) which, when applied to the ink transfer roller (2), extends in the axial direction thereof and which comprises at least one groove-type recess (7) extending in the direction of extension, at least two doctor blades (9) which are disposed in a roof-like manner and at least the edges of which can be applied to the ink transfer roller, front walls (15) which laterally separate the at least one groove-type recess from the surroundings and at least one separating device (16) in the groove-type recess, which separating device divides the groove-type recess into a main chamber (18) and one or more secondary chambers (17). The at least one separating device (16) has at least one opening (19).
