Abstract (en)

[origin: WO2009102822A1] A carrier (18) is provided for carrying a fuel component to be provided in a fuel tank (25) of a vehicle. The carrier includes a first sleeve bearing assembly (19) having a first shaft (22) and a first sleeve bearing (24) coupled with the first shaft. The first sleeve bearing is constructed and arranged to carry a fuel component (34) thereon. The carrier includes a second sleeve bearing assembly (26) having a second shaft (30) associated with the first sleeve bearing such that the first sleeve bearing permits guided movement of the second shaft, and a second sleeve bearing (28) coupled with the second shaft and associated with the first shaft such that the second sleeve bearing and second shaft can move in a guided manner with respect to the first shaft.
