Abstract (en)
[origin: WO2009103852A1] The invention relates to a heat exchanger (5, 6) comprising at least two separate flow channels for a flowing primary fluid and a flowing secondary fluid, which flow channels are arranged in heat exchange connection with each other in such a way that heat is transferrable between the primary fluid and the secondary fluid when they are flowing in separate flow channels. The heat exchanger (5, 6) according to the invention further comprises at least one auxiliary heater (7, 8) arranged integrally therein for raising the temperature of the primary fluid and/or the secondary fluid.
