Abstract (en)

[origin: WO2009115756A2] The present invention relates to the use of at least one partner for binding to an aldehyde derivative resulting from the peroxidation of lipids in protein-bound form, for instance to 4-hydroxy-2-nonenal, to 4-hydroxy-2-hexenal or to malondialdehyde, for the detection of ischaemia-modified albumin (IMA) in a biological sample.
