Abstract (en)

[origin: WO2009094611A2] Systems and methods are provided for at least partially automating generation of video clips chronicling a character's interaction with a video game. The same may combine automatic video clip generation with automatic or user-generated and/or user-edited or created narrative. Multiple video clips may be combined into a video reel prior to or subsequent to uploading the same to a file-sharing site. The video game may be a massive multiplayer online role-playing game.
