Abstract (en)

[origin: WO2009109042A1] A method of ameliorating negative gaming behaviour is provided. One or more gaming users are monitored, or monitoring data regarding their gaming behaviour is obtained. The gaming behaviour is analyzed to identify behaviour that may result in potentially harmful or addictive gaming behaviour (negative gaming behaviour). In the event of occurrence of such negative gaming behaviour, based on the specific negative behaviour one or more interactions are initiated between a system and the one or more users, such interactions being directed to ameliorating the negative gaming behaviour by preventative action. The gaming behaviour is analyzed based on a plurality of gaming behaviour risk indicators.
