Abstract (en)

[origin: WO2009112119A1] The invention relates to a wire terminal block (1) and to a method for production of a wire terminal block (1) with gel filler, wherein the wire terminal block (1) comprises at least one two-part housing (2, 3) in which wire terminal contacts (5) are arranged, wherein the housing (2, 3) forms cavities which are filled with a dielectric gel (10), wherein the gel (10) changes its viscosity, wherein the gel (10) is filled into the housing (2, 3) in at least two chronologically separate steps, wherein the time between the steps is selected such that the viscosity of the gel (10) in the preceding step has changed.
