Abstract (en)
[origin: EP2253474A1] The cartridge e.g. ink cartridge (1), has a lever (3) pivotably connected with a housing (2). The lever locks the cartridge in a printer device in a utilization position of the cartridge. A receiving area (5) receives a board (6) with a signalizing element (6a), which sends light signals from a LED. The receiving area is pivotably arranged at the lever. Latching projection units (3a) are provided at the lever and brought in contact with corresponding printer sided counter elements. The lever is connected at the housing via a hinge (4).
