Abstract (en)
A train control method is disclosed. The method includes: backing up train control data of a radio block centre (RBC) and obtaining backup data, where the train control data is used for controlling the train managed by the RBC; obtaining the alternative control information of the trains and controlling the trains by using the backup data. An RBC, an on-board device and a train control system are also provided. When the trains managed by the RBC need alternative control, the RBC may be replaced to control the trains, which guarantees that the trains run normally under control and improves the safety of the trains.
