Abstract (en)

[origin: EP2253546A2] The device has a frame (1) for encasing of goods stack (3) and comprising a holder for storage of foil storage roller (8). A foil conveying device (6) is provided for drawing a pre-determined length of foil for encasing of the goods stack. A camera is provided for recognizing and storing of a mark of the encased goods stack, where the device comprises a radio frequency identification tag. A measuring device is provided for measuring of the goods stack and co-acts with the camera such that measurement data determined by the measuring device is assigned to marking data for a certain goods stack. An independent claim is also included for a method for manufacturing the package unit.
