Abstract (en)
[origin: EP2253558A1] The present invention aims to provide a drip-absorbent sheet formed with characters and/or graphics without using ink for printing. A drip-absorbent sheet 1 comprises a liquid-pervious upper layer sheet 2 and a liquid-absorbent lower layer sheet 3 bonded to the bottom surface of the upper layer sheet 2. The upper layer sheet is formed by thermoplastic film and has a non-display region 10 occupying 70 to 99% of an entire area of the top surface 6 of the upper layer sheet 2 and a display region 11 occupying 30 to 1% of the entire area of the top surface. The non-display region 10 is defined by a section formed with a plurality of air- and liquid-pervious through-bores 8 uniformly distributed and the display region 11 is defined by an imperforated section surrounded by the non-display region and having a sufficient area to be formed with a plurality of said air- and liquid-pervious through-bores 8. The display region 11 or display sub-regions thereof may be configured in the form of characters, graphics or patterns.
