Abstract (en)
[origin: EP2253769A2] The arrangement (1) has a structural part arranged at a roof (2) or in an opening of the roof, where the structural part is provided as a residential roof window, a light dome, a fume outlet, a photovoltaic or solar heat element. A covering frame seal (16) seals a passage between the structural part and covering sheet metals (6, 8). The covering frame seal is fixed at the covering sheet metals using a fixing device (25), which produces a rear grip between the covering sheet metals and the covering frame seal.
