Abstract (en)

[origin: EP2253793A1] The assembly has a stopper (300) including a body projecting from a head toward a hollow core of a cross-piece (100) at an end of positioning and assembly of the stopper. The head is preformed to take external profiles of parts of an end (110) of the cross-piece and an end of a post (200) such that the stopper is blocked on a side that is oriented toward the ends of the cross-piece and the post. The stopper is made of polymeric alloy i.e. Noryl(RTM: blend of polyphenylene oxide and polystyrene). L-shaped sections are formed by the cross-piece and the post.
