Abstract (en)

The method of dividing the sunblind ladder of sunblind lamellas, when in front of the place of sunblind lamellas insertion between transversal branches of the sunblind ladder, the transversal branches are pulled apart and they are transported in pulled apart state to the location of sunblind lamellas insertion. After insertion of the sunblind lamella, the sunblind ladder and the sunblind lamella move away to the place for release of transversal branches of the sunblind ladder. The divider for this method performance includes two mirror-placed and motion-connected on running surface systems (A, B) of dividers (1), swing-adjusted from/to the work position.
