Abstract (en)

[origin: CA2717466A1] A conveyor dishwasher (1) has at least one wash zone (6, 7, 8, 9) and at least one final- rinse zone (10), also a control arrangement (36) and a wash-ware detector (34) which can sense the type of wash ware which is to be treated. The control arrangement (36) assigns each type of wash ware sensed to a defined wash-ware group, selects automatically, for each wash-ware group, a defined treatment programme by which the type of wash ware assigned to the wash- ware group is to be treated in at least one of the treatment zones (6, 7, 8, 9, 10, 26) of the conveyor dishwasher (1), and sets the process parameters associated with the treatment programme selected.
