Abstract (en)
[origin: WO2009093048A2] A collapsible container, which maximises the collapsed height to non- collapsed storage volume ratio, includes four vertical side assemblies, a base member and a top support frame. The base member defines a footprint of 'x' length and 'y' width. In the collapsed state the vertical height of the container assembly is the equivalent to five thicknesses of the base and in the non-collapsed state the vertical height is equal to the shorter of 'x' and 'y'. Also provided is a collapsible container in which, in the collapsed condition, all side walls and the top overlie the base and two opposed side walls are folded.
