Abstract (en)

[origin: WO2009103424A1] The invention relates to a filling machine for filling containers (2) with a filling material, comprising a rotor (3) that can be rotatably driven about a vertical machine axis (MA), several filling sites (7) that are embodied on the periphery of the rotor (3), said containers that are to be filled (2) being guided to filling points respectively via a container intake device (10) and the filled containers (2) are removed from said points on a container outlet device (14). Said invention is characterised in that said filling machine (1) is embodied in an off-floor manner or an essentially off-floor manner, at least below the filling sites (7) or below the displacement path on which the filling sites (7) displace when the rotor (3) rotates.
