Abstract (en)

[origin: WO2009120158A1] In an aluminium facade cladding having brick or ceramic cladding appearance, adapted to be mounted on a building and comprising at least one panel (10) and at least one connection component, it is foreseen that said panel (10) comprises a wing and an indent that are both formed in upper part of said panel (10), a post formed to make a right angle with said indent, a first arm (13) extending horizontally at a right angle from the lower part of the panel (10), a first wall (14) extending vertically and downwardly from said first arm (13), a second arm (15) extending horizontally from the bottom of said first wall (14), a second wall (16) extending vertically and downwardly from said second arm (15) and a knob (17) formed at the free end of the second stair (16) and adapted to be received in the indent (12.2) of an adjacent similar panel (10.1).
