Abstract (en)

[origin: WO2009103363A1] The invention relates to a method for authenticating and verifying individuals and units, wherein the data exchange between the units proceeds by means of relative data and/or encrypted data. The method is characterized in that the authentication and/or verification processes of individual and/or units are carried out by units that are allocated to individuals or that the authentication and/or verification processes of individuals and/or units are carried out by units authorized to authenticate and/or verify, a unit being authorized to authenticate and/or verify by the transmission of at least one copy of a power by a unit allocated to an individual through the unit allocated to the individual once the owner of the unit allocated to an individual is authenticated.
