Abstract (en)

[origin: EP2255694A1] The device (51) has a transmission and coupling device adjustable by a primary transmission device (131) during operation of an operating device (15), such that a secondary transmission device (133) and an adjusting device are adjustable. The coupling device is adjusted during operation of one of attachment-decoupling devices, while another decoupling device acts together with the coupling device in such a manner that the coupling device allows another primary transmission device (131a) and/or another operating device (15a) to be positionally-immovable. An independent claim is also included for an adjusting device comprising a coupling device.
