Abstract (en)
[origin: EP2256051A1] The container has a base (2), and side walls that are foldable and connected with one another. One of the side walls is connected with the base at a bottom edge using a hinge (15). The hinge is movably supported at the base and arranged perpendicular to a plane of the base. The side walls are connected at perpendicular container edges and are fitted on the base in a foldable manner. The base consists of a plastic molded part and slots, where the slots are formed as feet and molded downward. Latching noses are arranged at a groove for contacting a recess of the sidewalls.
