Abstract (en)

[origin: EP2256420A2] The method involves opening out the fluid channels in separated openings in a functional connection. The openings are sealed with detachable venting plugs. The fluid channels open into the surrounding area of the plate radiator (1) by releasing the venting plugs, and the heating plates are aerated. The openings are opened directly into the surrounding area by releasing the venting plugs. An independent claim is also included for a plate radiator with a sealing surface.
