Abstract (en)  
[origin: WO2009106961A1] The hydraulic circuit for the injection of fluids for applications in medicine, particularly radioactive diagnostic fluids in nuclear medicine, comprises an infusion line associable with a patient, introduction means for introducing a preset volume of a fluid for applications in medicine associated with the infusion line, and a support element for supporting the introduction means having fastening/release means for fastening to/releasing from the frame of an appliance for nuclear medicine, for the association of the introduction means with automatic injection means of the appliance.
