Abstract (en)
[origin: WO2009121539A1] The present invention generally relates to the generation of a light color by mixing a plurality of light emitting diodes (LEDs). More particularly, the invention is directed to the generation of a desired color and to the control of LEDs in order to obtain the desired color by mixing the light produced by the respective LEDs. It is proposed a method for controlling a plurality of at least four light emitting diodes or LEDs for generating a desired light or color, comprising applying (5) a pseudo- inverse matrix (M^{-1}) to the coordinate values (X_{ref}, Y_{ref}, Z_{ref}) of the desired light, said coordinate values (X_{ref}, Y_{ref}, Z_{ref}) being expressed in a color space, wherein the pseudo-inverse matrix (M^{-1}) is the pseudo-inverse of a gain matrix (M) reflecting the influence of each LED on said color space.
