Abstract (en)

[origin: EP2258897A1] The machine has a locking member (25) comprising a guiding element (29) with a latch plate element (30) that intervenes in a trap (35), and a thrust element (28). The thrust element is guided on the guiding element and held in a locking position by spring action. The guiding element is fastened to a frame (5) of a door. A door handle (9) is mounted above the thrust element and works with a cam (24) against the spring action on the thrust element such that the trap attains outer interference with the latch plate element.
