Abstract (en)

[origin: EP2258905A1] The drainage has a housing (2), in which an inlet channel (5) and a discharge collecting channel (12) are formed. The inlet channel and the discharge collecting channel are separated from each other by a retention area (10) for forming a waste trap. A housing cover (6) is formed at the upper side of the housing, which covers a central area of the housing. The inlet channel extends between an outer wall (7) of the housing and a separating wall (8) arranged within the housing. An independent claim is also included for a sanitary tub with a tub body.
