Abstract (en)
[origin: WO2009106493A1] Packaging, suitable for both tobacco and food products, has a laminate structure comprising first and second polymeric layers (6, 8), and a moisture-containing layer (7) interposed between the polymeric layers (6, 8), in which the moisture-containing layer (7) is arranged to transfer moisture to the interior of a container (1) formed by the packaging. The packaging enables its contents (3) to be kept moist, and may enable a consumer to control how moist the products are maintained through an appropriate configuration of moisture-containing layer (7) and the first polymeric layer (6).
