Abstract (en)

[origin: WO2009109893A2] A panel (10), in particular for making a structure which is resistant to bending, such as a floor (11) of a construction, in particular of a building, comprises at least a first and a second lightening block which are positioned side by side and a resistant element (12) between the lightening blocks which are positioned side by side. The resistant element (12) is a metal element for supporting the panel blocks.
