Abstract (en)
[origin: WO2009121711A1] The present invention relates to a refrigeration device comprising a housing (1) and a door (2) delimiting a thermally insulated interior space (3), wherein at least one cavity (5) for receiving a removable module (6) is disposed in the interior space (3) in at least one inside wall (14), wherein the removable module (6) is used for storing the cooled material support (4). Different modules with different supports for holding different cooled material supports (4) can thereby be disposed in the interior space (3).
