Abstract (en)

[origin: CA2716927A1] The present invention relates to a method for monitoring a mixture of at least two components and a rotor blade of a wind energy system, a gondola paneling of a wind energy system and a wind energy system itself. In order to provide a method in which the composition of the mixture can be monitored in a simple manner without damaging the work piece produced therefrom, in the method mentioned above a dye is added to each component, wherein each component is provided with its own dye different from the dyes of the other components, and the mixture of these components is monitored colorimetrically.
