Abstract (en)

[origin: WO2009105708A2] A computer identifies multiple resource identifiers, each resource identifier corresponding to a document at a respective data source. For at least one of the resource identifiers, the computer retrieves the corresponding document from the respective document source, identifies within the retrieved document a chunk that satisfies one or more user- specified search keywords, and displays the identified chunk and a link to the identified chunk within the document to the user.
