Abstract (en)

[origin: WO2009121619A1] In a computer-assisted system for managing and/or controlling a building management system, which system has a plurality of actuators (32, 33, 34), in particular lamps, sensors and/or command transmitters, which are located in different rooms, a database is provided, in which database information relating to the actuators (32, 33, 34), sensors and/or command transmitters of the building management system and also data about an axial cell structure of the building are stored. The system is designed to provide a graphical user interface (30) on a display, on which graphical user interface the building and the arrangement of the actuators (32, 33, 34), sensors and/or command transmitters located in said building are graphically displayed.
