Abstract (en)
[origin: EP2260819A2] The device has a base frame (4) comprising a lift drive (7) at which a lifting mechanism is arranged for lifting a person. The lifting mechanism is formed as a standing platform (1) with a holding device (6). A guide rail is connected with and arranged at the base frame, and a guiding profile (8) is movably supported on the guide rail in a longitudinal direction. The lift drive is formed as an electrically or hand-operated spindle drive or shear lifting frame. Tubular frames (2) have two L-shaped tubes symmetric to a middle longitudinal axis of the device.
