Abstract (en)  
A dispenser for dispensing sheet material from a roll and a complementary roll (10) of sheet material are disclosed, which roll (10) has a location arrangement for releasably mounting said roll between a spigot and an oppositely facing support element for rotation about a longitudinal axis of the dispenser, the arrangement comprising: a core (11) around which the sheet material is wrapped, one end of said core being mounted or mountable relative to said support element for rotation, the other end of the core having a wall region defining a generally hollow cylindrical portion (11) projecting from the wrapped material, a generally axial slot (14) being provided in the wall region extending to the free edge thereof; and a fixing (16) provided on said cylindrical portion (11), the fixing having a bearing surface (24) for rotatably engaging said spigot for rotational movement about said longitudinal axis, the fixing (16) having a radial path (30) to said bearing surface, the path being radially aligned with the slot (14) in said core, whereby the end of the core (11) may be laterally engaged with said spigot support element.
