Abstract (en)
The element has a gutter body (10) comprising a side wall (16), which are extended parallel to each other and lie opposite together. The side wall defines open front sides (18, 20) of the gutter body at ends of the side wall. The wall comprises a prefabricated opening (36) for lateral coupling of another gutter element. A flange device attaches the laterally coupled gutter element at a region of the prefabricated opening. The flange device is extended along an edge of the side wall, where the edge limits the prefabricated opening.

Abstract (de)
Die Erfindung betrifft ein Rinnenelement, insbesondere für ein Entwässerungsrinnensystem, mit einem Rinnenkörper, welcher zwei einander gegenüber liegende und sich im Wesentlichen parallel zu einander erstreckende Seitenwände umfasst, die an ihren Enden offene Stirnseiten des Rinnenkörpers definieren.
